

Twin Quinella Rules

The object of Twin Q wagering is for the bettor to select the winning Quinella in each of two different races. In order to win the Twin Q jackpot, a player must select the winning Quinellas in two designated races selected by William Hill.

A Quinella requires the player to pick the first two (2) finishers of a race without specifying the exact order of finish. In the event of a dead-heat to win, the winning Q will be the two horses that finish in the win dead-heat. In the event of a dead-heat for place, there will be two winning combinations. Entries of the field go as one in the Twin Q. All payouts are aggregate. All tickets go as written.

Eight (8) horses must go in each half of the Twin Q for action. If less than 8 horses should start, all monies will be refunded.

The \$ amount of the ticket is figured as follows:

(The number of combinations in the first half) x (the number of combinations in the second half) X the bet

\$2 Quinella Costs

Quinella 1,2 \$2 (two combinations)

Quinella 1,2,3 \$6 (six combinations)

To figure the cost: Multiply the number of horses used by the number of horses used less one.

Other Quinella combinations include:

Quinella 1,2,3,4 \$12 (12 combinations)

Quinella 1,2,3,4,5 \$20 (20 combinations)

Quinella 1,2,3,4,5,6 \$30 (30 combinations)

Quinella 1,2,3,4,5,6,7 \$42 (42 combinations)

Read more combinations on the back side.
